Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments filed 09-03-09 have been fully considered but they are not persuasive. Examiner has thoroughly reviewed applicant's arguments but firmly believes the cited reference to reasonably and properly meets the claimed limitations. In response, examiner would like to point out that Hahn teaches mobile terminal is provided according to the invention, for use of a heterogeneous mobile radio system having at least one first mobile radio network (circuit switch network [cellular]) and one second mobile radio network (packet switch network [WLAN]), the mobile terminal can simultaneously maintain connections to the first and to the second mobile radio network (abstract. Para. # 0031, 0043).

Hahn does not specifically teach to utilize a non-unique address to managing independently each of plural communication networks. In an analogous art, Forslow teaches a non-unique address (the mobile station is configured with a common network address [non-unique address] for subsequent application flows with the external network entity for both of the circuit-switched and packet-switched networks (para. # 0031, 0097, fig. 2, 11).

In paragraph 0031, Forslow teaches for both of the circuit-switched and packet-switched networks [i.e., plural communication networks] a mobile station is configured with a common address [i.e., non-unique address] for subsequent application flows with the external network entity weheras in paragraph 0105, Forslow also teaches both of the circuit-switched and packet-switched network sharing same IP/network address [i.e., non-unique address] in the mobile station. In otherword, the system of Forslow is managing each of the networks independently after receiving the common address. Thus, the combination of Hahn and Forslow teaches the claimed limitations.
